Brainstorming & Ideation Phase

Project Title: ComicCraft – AI Comic Story Creator Using Gemini Models

College Name: Government Arts and Science College, Manur.

College Code: MSU142

Department: B.SC Computer Science

Team ID: 6ab214cd186ba30941b6117f

Team leader: Swetha D NMID: DC7909570E81C629D5840AFD7E3314CD

Team member: Santhi S NMID: 3A2360143DF92A195DF45E8B245C0012

Team member: Jayaabitha A.S NMID: AAEE35007C90E8898C44BEBE43775768

1. Introduction

ComicCraft is an AI-powered comic story creation system that uses Gemini models to help users create engaging comic stories from simple ideas or prompts. The brainstorming phase focuses on identifying the project concept, user needs, key features, and possible solutions.

2. Problem Identification

Creating a complete comic manually can require considerable time and creativity. Users may find it difficult to develop a storyline, characters, dialogues, and scene descriptions consistently. ComicCraft aims to simplify this process by using AI to assist users in generating and developing comic content.

3. Project Idea

The main idea is to develop an easy-to-use application where a user provides a story idea, theme, or prompt. Gemini models process the

input and generate suitable story content, including characters, dialogues, scenes, and narrative elements.

4. Objectives

- Develop an AI-assisted comic story creation platform.
- Generate creative stories from user prompts.
- Generate characters, dialogues, and scene descriptions.
- Reduce the time required to create a comic storyline.
- Provide an interactive and user-friendly experience.
- Allow users to edit and regenerate AI-generated content.

5. Key Features Identified

- User prompt input
- AI-based story generation
- Character creation and description
- Dialogue generation
- Scene and panel description generation
- Content editing and regeneration
- Comic preview and export options

6. Target Users

The proposed system can be useful for students, beginner comic creators, writers, storytellers, educators, and users who want to experiment with AI-assisted storytelling.

7. Technology Idea

Gemini models are considered for understanding user prompts and generating creative text-based comic content. A web or application interface can be developed to connect users with the AI system.

8. Expected Outcome

The brainstorming phase results in a clear project concept for ComicCraft: an AI-assisted platform that makes comic story creation

easier by helping users transform simple ideas into structured stories, characters, dialogues, and scenes.

9. Future Possibilities

Possible future enhancements include AI-generated comic illustrations, multiple art styles, voice-based storytelling, character consistency across panels, multilingual support, and downloadable complete comic books.
